## S3 Resistance Homework

Answer these questions in your homework jotter, showing full working.

1. The same three resistors are connected in different ways, as shown. Calculate the total resistance between points $X$ and $Y$ for each arrangement of resistors.
(a)

(b)

(c)

(d)

2. Calculate the total resistance in the circuit shown below.

3. A pupil builds the series circuit shown below.

Calculate:
(a) The total resistance in this circuit.
(b) The current flowing through the $12 \Omega$ resistor.
(c) The current flowing through the $7 \Omega$ resistor.
(d) The voltage across each resistor in the circuit.
4. A second pupil decides to build this parallel circuit.

Find
(a) The total resistance in this circuit.
(b) The voltage across each of the resistors.
(c) The current flowing through each resistor.
(d) The total current supplied by the power supply.

Hand in your jotter no later than Monday $\mathbf{1 7}^{\text {th }}$ December.
